Skeletal System Unit Test

Study Guide: Make sure you know this stuff for your test, either Wednesday or Thursday!

- The different types of tissues that make up the skeletal system.
- Parts and features of a typical long bone.
- Be able to identify a location for a group of bones
  - (ex. Tarsals, metatarsals, fibula & tibia - lower limb bones)
- Describe the functions of the skeletal system.
- Identify and write the major bones of the axial and appendicular skeletons.
- Know the functions of bone markings (ex. Spine, fossa, tuberosity, etc.)
- Types and descriptions of joints
- Different diseases and disorders of the skeletal system.
- The healing process of bone.

Use your notebooks, textbooks, and posters to help you study. You can also use online helps! Be ready when you take the test.
